

Technical SEO Audit Report

Audit of the live Hathor marketing site on www.easytravegypt.com. Visual design, layout, motion, colour and typography were left unchanged. Only indexability, metadata, structured data, redirects, internal linking and documentation were in scope.

7 September 2026 · Senior technical SEO · Confidential

Critical → Fixed Site was noindexed on the production domain	Critical → Fixed Royal Suite URL redirected to Charter	Health now Foundation in place; rankings still need GSC time
--	--	--

1. Current SEO health

Before this pass the redesigned site could not rank. Static metadata and middleware both issued `noindex`, follow for www.easytravegypt.com as well as Vercel preview hosts. There was no `sitemap.xml` or `robots.txt` route. Canonical hosts disagreed (easytravegypt.com vs hathorcruise.com). Structured data existed only on Home 3 and Terms. The highest-authority Royal Suite URL transferred to Charter.

After this pass, production is indexable, preview hosts remain `noindex`, a keyword map is enforced in metadata, Organisation / WebSite / Breadcrumb / BoatTrip / Service / HotelRoom schema is in place, and internal links follow Homepage → Voyages → routes, plus Charter and Suites/Cabins.

Rankings will not move until Google recrawls. Submit the sitemap in Search Console and request indexing for the Royal Suite and voyage URLs.

2. Technical issues found

Issue	Priority	Status
Production domain listed as a temporary host and noindexed (meta + X-Robots-Tag)	P0 Critical	Fixed — easytravegypt.com indexes; *.vercel.app stays noindex
/Luxury-Royal-Suites-Nile-Dahabiya-Cruise → /charter	P0 Critical	Fixed — now 308 to /royal-suites
No sitemap or robots.txt App Router files	P0 Critical	Fixed — <code>app/sitemap.ts</code> , <code>app/robots.ts</code>
Split metadataBase / schema origin (hathorcruise.com vs easytravegypt.com)	P1 High	Fixed — canonical origin https://www.easytravegypt.com
About, Home 3, rooms, suites, cabins cannibalising the same head terms	P1 High	Fixed in titles; Home 3 noindexed
Missing Organisation, WebSite, Breadcrumb, Service, HotelRoom schema on commercial pages	P1 High	Fixed
No indexable URLs for “Luxor to Aswan Nile Cruise” / “Aswan to Luxor Nile Cruise”	P1 High	Fixed — /voyages/luxor-to-aswan and /voyages/aswan-to-luxor
Blog articles used full excerpts as descriptions; OG images missing; linked cruises-list not voyages	P2 Medium	Fixed — clipped descriptions, article schema, commercial CTAs

Issue	Priority	Status
Booking/admin could inherit production index:true once noindex was lifted	P1 High	Fixed — layouts noindex; robots.txt disallow
Title template doubling brand on some pages; weak CTR copy	P2 Medium	Fixed — absolute titles, natural luxury language

3. Keyword mapping

Page	Primary intent	Must not target
/	Luxury Dahabiya Nile Cruise	Route-specific or Royal Suite terms
/voyages	Nile itineraries hub	Exact “Luxor to Aswan Nile Cruise”
/voyages/luxor-to-aswan	Luxor to Aswan Nile Cruise	Aswan to Luxor; charter
/voyages/aswan-to-luxor	Aswan to Luxor Nile Cruise	Luxor to Aswan; charter
/charter	Private Nile Cruise Egypt / Private Dahabiya Charter	Royal Suite
/luxury-cabins-Nile-Cruise	Luxury Nile Cruise Cabins / Rooms	Suites
/suites	Luxury Nile Cruise Suites (collection)	Cabins; Royal Suite
/rooms	Hathor Luxury Suite (46 m² product)	Collection head term
/royal-suites	Royal Suite Nile Cruise	Charter
/blogs/*	Informational long-tail	Any commercial primary as the title
/cruises-list	Book / scheduled sailings	Editorial voyage story
/home-3	noindex	Homepage keywords

Full map: docs/seo/keyword-map.md

4. Competitor gaps

Competitor	They win on	Hathor gap to exploit
Nour El Nil	Fleet pages, “authentic dahabiya”, Esna–Aswan 5-night	Directional Luxor/Aswan URLs; Royal Suite URL; charter service page
Ashranda	Vessel + hotel group; on-page FAQs	Pure-play dahabiya; do not dilute with hotels
Dahabiya.net	Exact-match “dahabiya” listings	Luxury trust, original content, no stuffing
Sonesta Amirat	Chain domain, inclusions FAQ, 4-night both ways on one URL	Split direction pages; 12-guest intimacy
Merit Dahabiyas	Day-by-day itineraries; charter mention	Single canonical domain; do not mix charter into suite titles
Oberoi	“Luxury Nile cruise” (motor ships), HotelRoom schema	Dahabiya modifier only — do not fight the head term

Competitor	They win on	Hathor gap to exploit
Sanctuary / A&K	Package / tour authority	Direct private charter; independent travellers
Viking	Generic “Nile cruise” head terms	Differentiation journal → /voyages and /charter

Living tracker: docs/seo/competitor-tracking.md — attach GSC/Ahrefs ranks monthly.

5. Recommended fixes (this pass vs later)

Implemented now (no visual redesign)

- Index production; keep Vercel previews noindex.
- Rewrite titles and meta descriptions for CTR and one intent per URL.
- Add Organisation, WebSite, Breadcrumb, BoatTrip, Service, HotelRoom, BlogPosting schema.
- Add sitemap.xml and robots.txt.
- Repair Royal Suite redirect; add voyage and luxury-suites aliases.
- Internal links: homepage itineraries → /voyages; gallery suites → /suites; footer commercial column; blog CTAs mapped by topic.
- Create /voyages/luxor-to-aswan and /voyages/aswan-to-luxor using the existing voyages editorial system.
- Noindex Home 3, booking, admin.

Next (content, not design system)

- P1 — Unique itinerary body on the two route URLs so they are not near-duplicates of /voyages.
- P1 — Search Console property + sitemap submit + URL inspection for Royal Suite and both voyage routes.
- P2 — Real FAQ blocks only where copy already answers questions, then FAQPage schema.
- P2 — Replace remaining empty decorative alts only when the image is informative.
- P2 — Monthly rank fill-in on the competitor tracker.
- P3 — Retire /home-3 from the nav, then 308 it to /.

6. Priority legend

P0 blocks all organic growth (noindex, wrong 308, missing sitemap).

P1 decides which URL can rank (cannibalisation, schema, directional pages).

P2 improves CTR and supporting content.

P3 housekeeping once the foundation is crawled.

7. Files

Implementation lives under lib/seo/, components/seo/, app/sitemap.ts, app/robots.ts, page metadata, and next.config.ts redirects.

Documentation: docs/seo/keyword-map.md, docs/seo/redirects-audit.md, docs/seo/competitor-tracking.md.
